WORK EXPERIENCE

Data Center Technical Support
Engineer
Pixcel Pic Pvt (System
Integrator for Lookman At SASA
Smart City Project Ahmedabad)

- Data Center Technical Support Engineer & Infrastructure Engineer
- Pixcel PIC (System Integrator for Lookman At SASA Smart City Project Ahmedabad)
- Jan 2026 – Present
- Managing complete Data Center operations for TCC and CCC infrastructure environments.
- Handling Dell PowerEdge M1000e chassis, Dell Blade Servers M630 & M640 including deployment, troubleshooting, maintenance, hardware diagnostics, and server component management.
- Managing Dell EMC Isilon storage along with SAN and NAS infrastructure environments.
- Working on virtualization platforms including Hyper-V, VMware, and Oracle VirtualBox with Linux & Windows Virtual Machines and Host Servers.
- Providing administration and troubleshooting support for Active Directory (AD), DNS, DHCP, NTP Server configuration, RAID management, backup monitoring, and enterprise server infrastructure.
- Monitoring server health, uptime, storage performance, virtualization resources, network connectivity, and critical infrastructure alerts.
- Performing infrastructure troubleshooting, firmware updates, remote server management (SSH/RDP/iDRAC), and coordinating with technical teams for operational support and infrastructure optimization.

Key Skills & Tools:

- Dell PowerEdge Servers, Hyper-V, VMware, Dell EMC Isilon, SAN/NAS, Active Directory, DNS/DHCP, Linux & Windows Server Administration, Infrastructure Monitoring, NDR, VMS Monitoring.

Security Analyst & Technical
Support Engineer
Velocity Bytes Tech (System
Integrator for BSNL At Smart
City Project Ahmedabad)

- Security Analyst & Technical Support Engineer
- Velocity Bytes Tech (System Integrator for BSNL At Smart City Project Ahmedabad)
- Feb 2025 – Jan 2026
- Working at Velocity Bytes Tech, a BSNL-approved System Integrator (SI) company, specializing in NDR (Network Detection and Response) solutions for enterprise cybersecurity.
- Providing technical support and implementation services for NDR solutions, focused on network traffic analysis, anomaly detection, and real-time threat response.
- Responsible for deployment, configuration, and troubleshooting of the NDR tool across client environments, ensuring smooth integration with existing firewall and SIEM systems.
- Perform log analysis, packet inspection, and alert fine-tuning to reduce false positives and improve detection accuracy.
- Collaborate with internal teams and clients for policy creation, rule optimization, and dashboard customization as per use-case requirements.
- Deliver training and documentation for end-users and technical teams to enhance understanding and use of the NDR tool.

Key Skills & Tools:

- NDR Platform (custom/ATF), Fortinet Firewall, Linux, Wireshark, Syslog, Putty

Data Analyst & Operations
Supervisor
Ahmedabad Smart City Project

- Data Analyst & Operations Supervisor
- Ahmedabad Smart City Project
- Feb 2023 – Feb 2025
- Location: Ahmedabad, Gujarat
- Worked as a Data Analyst and Field Operations Supervisor in the Ahmedabad Smart City Project, focusing on urban technology, surveillance, and smart infrastructure.
- Handled CCTV camera operations city-wide, including monitoring, maintenance coordination, and incident analysis.
- Served as team in-charge for 10 staff members, responsible for daily task assignment, performance supervision, and on-ground issue resolution.
- Managed the CCRS (City Command and Control Room System) portal, ensuring accurate data reporting, escalation handling, and dashboard maintenance.
- Prepared and maintained daily and monthly reports for smart infrastructure including:
 - Smart Toilets (usage, alerts, maintenance)
 - Smart Parking Systems (occupancy data, issue tracking)
 - Other integrated smart services like street lighting, solid waste monitoring, and environmental sensors.
- Ensured real-time coordination with municipal officials, system integrators, and tech vendors for issue resolution and operations continuity.
- Supported in data collection, analytics, and MIS reporting for internal use and higher-level dashboards used by city governance bodies.

Key Skills & Tools:

- Excel, CCRS Portal, Team Supervision, Data Analysis, Smart City IoT Devices, Field Operations, Report Writing, Incident Handling

PROJECTS

VMS Camera Monitoring Tool (Ongoing Project)

2026

Developing a VMS Camera Monitoring Tool to monitor CCTV camera health, recording status, playback, and site-based security activity. The system helps detect camera issues such as blurred video, frozen camera feed, offline camera status, and low-quality footage with automatic alert generation.

Key Responsibilities & Features:

- Developed a centralized dashboard for live camera and VMS health monitoring.
 - Implemented camera fault detection for blur, freeze, offline status, and poor video quality.
 - Created alert functionality with timestamp-based logs for camera health issues.
 - Added recording functionality to store camera footage for security review.
 - Integrated playback feature to view previous recordings by camera, date, and time.
 - Added geofencing support to monitor site/camera activity within defined location boundaries.
 - Built admin features to manage cameras, sites, users, alerts, recordings, and playback access.
 - Improved surveillance reliability by providing real-time camera health visibility and quick issue identification.
 - Currently working on additional automation, reporting, and advanced monitoring features.
-

PROJECTS

SMTC Monitoring Tool – Data Center Infrastructure Monitoring Project

Developed a centralized monitoring tool for Blade Servers, Hyper-V VMs, and chassis infrastructure. The tool monitors CPU, RAM, cores, disk usage, VM performance, chassis temperature, fans, PDU status, blade health, and overheating alerts. Implemented smart AI-based alert generation with timestamps and email notifications for critical issues. Integrated one-click Hyper-V VM backup support for local, NAS, and SAN paths. Built inventory management and admin control modules to manage servers, chassis, VMs, alerts, backups, and infrastructure details from a single dashboard.

Key Features:

2026

- Centralized monitoring dashboard for Blade Servers, Hyper-V VMs, and chassis infrastructure.
- Real-time CPU, RAM, core, disk, uptime, and performance monitoring.
- Hyper-V VM monitoring with resource usage and running status tracking.
- Smart alert system for high CPU, RAM, disk usage, temperature, and node health issues.
- Email notification integration for instant alert updates on mobile/email.
- Chassis monitoring for fans, PDU status, blade count, slot status, and temperature.
- Overheating detection for blade servers and chassis components.
- One-click Hyper-V VM backup to Local, NAS, or SAN storage path.
- Inventory management for server location, configuration, status, and site details.
- Admin panel to manage servers, VMs, chassis, alerts, backups, and users.

Key Skills & Tools Used

Python, HTML, CSS, JavaScript, Bootstrap, Flask/Django, PostgreSQL, SQLite, REST API, Hyper-V, Windows Server, Linux, Dell Blade Server Monitoring, Dell Chassis Monitoring, CPU/RAM/Disk Monitoring, VM Monitoring, Email Alerting, Backup Automation, NAS/SAN Storage, Inventory Management, Admin Dashboard, SNMP, PowerShell, SSH.

Network Monitoring System with Linux Server Status & Threat Intelligence

Network Monitoring System with Linux Server Status & Threat Intelligence (2025)

2025

Developed a custom Network Monitoring System (NMS) that monitors server availability and performance using ICMP ping and SSH-based health checks for Linux servers. The system provides real-time insights into server status (CPU, memory, disk, and uptime) and network availability. Additionally, integrated a threat intelligence module to analyze IP addresses and provide malicious scores, enabling proactive detection of potentially harmful connections.

Key Features:

Ping-based server availability checks

SSH-based Linux server health monitoring (CPU, memory, disk usage, uptime)

Threat intelligence integration for IP reputation and malicious score lookup

Real-time alerts and reporting

NMS (Network Monitoring tool with Inventory Management and topology management tool).

2025

Built a full-featured NMS platform that monitors servers, tracks uptime, generates SLA reports, manages tickets, handles inventory and displays network topology. The system supports both admins and general users with role-based access.

Central dashboard showing all server groups with live UP / DOWN / Maintenance status

Real-time server health checks using automated ping reachability

Detailed logs showing ping history and last-checked status

Exportable server summary in Excel / CSV

SLA & uptime reporting with date-range selection, downloadable as PDF or Excel

In-built Ticketing Tool (create, assign, track, close tickets)

Inventory Management (add, edit, delete, bulk upload via Excel)

Network Topology Builder (add devices, create links, visual network map)

Role-based User & Menu Access Management

PROJECTS

2023 Encryption

Definition : the process of protecting information or data by using mathematical models

Software :CYPHERIX language : C++ , CRYPTO ++
created one encryption secret key to use for file data decryption . encryption is
very important for online banking , e-commerce

2023 Trojan Analysis

Definition : Trojan Virus Analysis & Create A Own Trojan

Software : Microsoft Defender , System Restore Point
Create One Trojan Virus And Test Tools and Identify Trojan Virus

EDUCATION

- MSC IT Network Security
Gujarat University - Ahmedabad
Year 2022-2024
- Bachelor of Commerce
C.U Shah Commerce College
Gujarat University - Ahmedabad
Year 2018-2021

TECHNICAL SKILLS

- Networking & Subnetting
- Operating Systems: Windows Server, Linux Server
- Database: PostgreSQL, SQLite, SQL Database
- Windows Server & Active Directory
- Cybersecurity Tools: NDR, Firewall, VMS Monitoring
- Threat Detection & IOC Analysis
- Technical Support & Troubleshooting
- Programming/Scripting: Python, Bash, PowerShell
- Web Technologies: HTML, CSS, JavaScript, Bootstrap
- Frameworks: Flask, Django
- Server & VM Monitoring: Hyper-V, Blade Server Monitoring, CPU/RAM/Disk Monitoring
- Hardware Monitoring: Dell Blade Server, Dell Chassis, PDU, Fan & Temperature Monitoring
- Automation: Email Alerting, Backup Automation, NAS/SAN Backup Integration
- Camera/VMS Tools: Camera Health Monitoring, Recording, Playback, Geofencing
- Admin & Inventory: Admin Dashboard, Inventory Management, User Access Control

SOFT SKILLS

- Leadership
- Communication
- Team work
- Time management

ACCOMPLISHMENTS

- Network Security Workshop Certificate by PSY 9
- Learn CCNA 200-301 Network Fundamentals Online
- Ethical Hacker - Cisco
- SQL Injection Attacks
- Stenography & Secretarial Practice

EXTRACURRICULAR

- Traveled Various Diffrent Place
 - Sports like hockey, Volley Ball, Mobile Games,
-
